

STEAM Car Dealerships

Save man hours by reducing car cleaning to just one device that does it all! The Optima Steamer eliminates the need for chemicals and provides an effective sanitizing clean for the entire vehicle inside and out. With no waste-water or overspray, you may effectively clean an entire vehicle right where it rests at your dealership!

Why use steam?

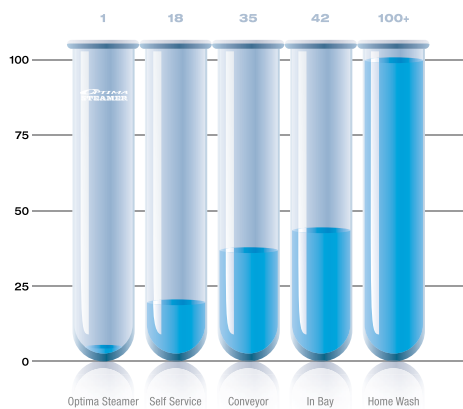

- Consume as little as 1 gallon of water per car
- No over-spray or waste-water run-off
- Deodorize and sanitize surfaces without chemicals
- Remove stains from upholstery in less time and using less water than an extractor
- Clean interiors, exteriors, engine compartments, door jams, floor mats, tires, trunks, upholstery, wheel wells and more

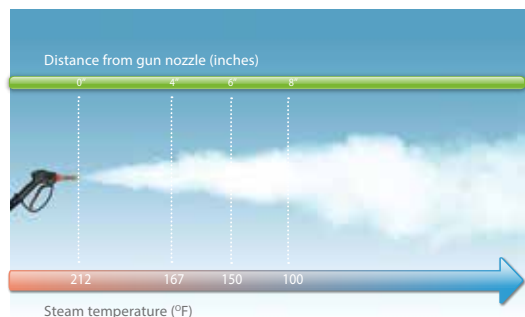

Why choose the Optima?

- Two operators can clean at once
- Up to 65' (20m) of hose length
- Adjustable moisture control valve
- Easy to operate and maintain
- Automated boiler and safety features
- Quiet
- Mobile
- Sleek design

Average water consumption per car wash type, gallons

Optima STEAMER steam temperatures

Reduce Your Equipment Requirement

Car wash and detailing equipment cost money. It cost even more to maintain and train employees on each piece of equipment. The Optima Steamer can eliminate your need for a pressure washer, injector/extractor, waste-water reclamation mat, buckets, wash mitts and an air compressor.

Reduce Your Chemical Consumption

Steam allows a mobile car wash operator to drastically reduce their chemical consumption. In fact, steam eliminates your need for window cleaning chemicals, soaps, detergent and other abrasive and harmful compounds. With a moisture control feature, the Optima Steamer achieves wet or dry steam. Heat of the steam will break down dirt and grime easily, and gentle yet powerful steam pressure will lift them up from vehicles' surface. The temperature of steam can be easily controlled by the distance you hold it from the surface, ensuring no damage to surface, especially paint and clear coats!

Eliminate Waste-Water

Untreated waste-water impacts the environment. The equipment required for containing waste-water and the cost to maintain it decreases productivity and profit. Using the Optima Steamer, a car wash operator can clean a car without producing waste-water. Eliminating the need for a waste-water reclamation mat and containment system decreases wash time per car and increases your earning potential.
